

HACKATHON SUBMISSION

BreakoutAI

Candidate Intelligence Engine

An AI-powered candidate ranking system that scores talent on execution ability, behavior, and market validation — not just keywords.

Problem Statement

Recruiters miss great candidates because keyword matching ignores what actually predicts success.

Behavioral Signals

Real-world habits like GitHub activity and responsiveness are invisible to keyword scans.

Execution Ability

Whether a candidate can actually ship, not just list skills on a resume.

Responsiveness

Speed and reliability in communication are strong predictors of hire success.

Market Validation

How a candidate's profile stacks up against real market signals and demand.

Dataset Overview

What powers the ranking model

Candidate Profiles & Skills

Structured records covering each applicant's declared skillset.

Career History

Prior roles and experience trajectory for every candidate.

23 Behavioral Signals

Engagement and reliability indicators beyond the resume.

AI Intern Job Description

The target role description used to compute skill-fit match.

System Architecture

From raw candidate data to a ranked shortlist

Breakout Fit Engine

How the four scoring pillars are weighted

 Execution & Coding Reality **35%**

 Startup Urgency & Responsiveness **25%**

 Professionalism & Reliability **20%**

 Market Validation **20%**

Features Used

Two feature families feed the ranking model

Technical Skills

- Python, NLP, ML, LLM skills
- Prior work experience

Behavioral Signals

GitHub Activity

Response Rate

Interview Completion

Open to Work

Scoring Formula

Final Score is a weighted blend of three components

55%

Skill Match

+

25%

Behavioral Signals

+

20%

Experience

Top 100 candidates are selected from the final ranked score.

Results

What the system outputs at the end of the pipeline

Ranked Top 100 Candidates

The full candidate pool distilled to the highest-fit shortlist.

submission.csv Generated

A clean, ready-to-submit ranked output file.

Explainable Ranking System

Every score traces back to transparent, weighted signals.

Future Work

Where the Candidate Intelligence Engine goes next

Semantic Embeddings

Move beyond keyword-level matching to deeper meaning-based comparison.

LLM-Generated Explanations

Natural-language rationale behind every candidate's score.

Personalized Recruiter Preferences

Let recruiters tune weighting to their own hiring priorities.

Interview Prediction

Forecast interview performance ahead of time.

Thank You

BreakoutAI Candidate Intelligence Engine

Building smarter hiring systems.
